CHRISTOPHER NGO

ingochris@pm.me
GitHub: ingochris
LinkedIn: ingochris
www.ingochris.tech

SKILLS

ATTACK: BURP, CAINE, Hydra, Kali Linux, Metasploit, NESSUS, Nexpose, Wireshark, ZAP, CWE 25, OWASP 10

DEFENSE: ACL, COBIT, EnCase, Fiddler, FTK, IDS/IPS, NIST, Nmap, SIEM, Splunk ES

CLOUD: Amazon AWS, Google Cloud, Microsoft Azure

GNU/LINUX/UNIX: AWK, BASH, CIFS/SMBFS, GIT, KS, NFS, PXE, RAID, REGEX, ZSH

NETWORK: Cisco IOS + TTL, Firebug, OSI Model, Routing, Switching, Subnetting

SYSADMIN: AD, Ansible, Chef, Docker/Kubernetes, Heroku Microservices, LDAP, MS 365, NGINX, Puppet, Splunk, ELK

VIRTUAL: VirtualBox, VMware Player, vSphere ESXI

WEB: Flask, HTML/CSS, JavaScript, jQuery, LAMP Stack, MEAN Stack

HONORS

Top 5% of RITx Computer Forensics (21,680 Students)

Winner of GitHub HackUK Hack Quarantine 2020

Winner of Caltech Hacktech Security Challenge CTF 2020

Winner of Stanford Cybersecurity TreeCTF 2018

Winner of Stanford TreeHacks Hackathon 2018

Winner of PayPal WWC Hackathon 2017

Winner of Silicon Valley Hackathon 2016

Winner of HackingEDU Hackathon 2015

Winner of UCSBHacks FLIR Security Challenge 2014

EDUCATION

Rochester Institute of Technology (RITx)
Cybersecurity

Computer Science

Mission College
Ethical Hacking

SELECT EXPERIENCES

Linux Support Engineer (Silicon Team - AMS) at Microsoft — Feb 2021 - Present

- EDA HPC (High Performance Computing) Unix infrastructure automation on Azure DevOps and premise

Principal Consultant at ingochristech — May 2017 - Feb 2021

- Contribute full life cycle development of web applications and manage clients' IT infrastructure
- Create strategic and technical training for stealth startups per clients' needs
- Lead on-site development workshops and gave tech talks/speaking engagements to 2,000+ hackers
- Placed in Top 15 Cybersecurity CTF Penetration Testers (*MIT Cambridge2Cambridge Nationals*)

Senior Test Engineer (Server NPI & Sustaining) at Quanta — Jul 2015 - May 2017

- Team Lead: Managed, mentored, and trained team of 8 Test Engineers and 20 Server Lab Technicians to delegate on mission-critical operation objectives in production environments
- Defined product test life cycles with PMs and shipped over 2 million servers for Hyperscale Computing Projects: *Amazon AWS, EMC VxRail, Facebook CDN, Google Cloud Platform, Microsoft Azure/Bing, Open Compute Project, QCT STRATOS, QuantaGrid, QuantaPlex, QxStack VMware EVO SDDC*
- Designed and managed 40GbE/100GbE lab networks connecting customer datacenters using *Arista EOS, Cisco IOS, Delta ONIE, Facebook/OCP FBOSS, Juniper Junos OS,* and *Palo Alto Networks Firewalls*
- Programmed and released software suites for integrated L10-L11 rack server system and network white-box tests in BASH, C, Perl, Python, SQL, and Cisco TTL (TeraTerm Language)
- Wrote automation programs that reduced time-cost by 99%+ in mass-production QA, tests, and firmware flash deployment: *BIOS, BMC, CMC, FRU, HDD, Intel ME, NIC, RAID, SSD, TPM*

Customer Support Engineering Intern at Violin Memory — Oct 2013 - Jun 2014

- Built custom dashboards for administration of account, case, and knowledge databases with custom developed plugins for company-wide *Salesforce CRM*
- Remote callhome feature module management of FFA (Flash Fabric Architecture) storage systems for customers/production and development
- Spearheaded company data migration project from *Google Sites* to *Microsoft SharePoint* servers

Developer, Webmaster at Cyber Shop — Jan 2006 - Oct 2013

- App/game development in C (BSD PSPSDK), Java ME, Lua, Macromedia Flash Lite, and sdlBasic
- Built and maintained websites with CMS (Drupal, Joomla, WordPress) written in AJAX, CSS, HTML, JS, and PHP hosted on Angelfire, Google, Tripod, and Yahoo! Geocities
- Customer consultations for hardware/software/network diagnostics, repairs/rebuilds, upgrades/downgrades, and malware/virus removal on GNU/Linux, Mac, and PC on site and VNC
- Performed jailbreak services for root-privilege to flash custom firmwares and homebrew software in mobiles (*Android, iOS, PPC/Windows Mobile, PSP, Sansa, Symbian OS*) and WLAN routers (*DD-WRT*)
- Website asset, layout, and plugin development for sale via platforms Myspace, Neopets, and Tumblr

EDUCATION ROLES

Online Teaching Assistant at Cybrary IT — Feb 2020 - Present

- Support cybersecurity students and instructors while creating course content

Hacking Instructor (Consultant) at Make School — Mar 2017 - Apr 2018

- Coached 900+ students on hardware/software hacking projects
- Delivered tech education talks as a speaker at conferences/hackathons with 200-900 participants
- Taught Introduction to Computer Science and Building Games on iOS (Flappy Bird, Pokémon)

Remote Developer Evangelist (Champion) at Clarifai — Aug 2016 - Nov 2016

- Deep learning API integration, public speaking, and technical writing

Hardware Programming Ambassador at Hackster — Aug 2016 - Oct 2016

- Taught hardware programming with Arduino microcontrollers and sensors on C++ codebender IDE

Research Scholar (Privacy & Security) at Stanford — Sep 2015 - Jun 2018

- Contributed to privacy research talks on machine learning/natural language processing

Stanford University Coordinator at Hackathon Hackers — Sep 2014 - Jun 2018

- Led competitive hackers from Stanford to *Major League Hacking* collegiate hackathons

BOARD ROLES

Board Member at Siliconhacks — Dec 2016 - Jul 2018

Board Member at Spectra (YouTube Partner) — Dec 2015 - Jul 2017

Board Member at HackingEDU — Oct 2015 - Dec 2016

SIDE PROJECTS I AM PROUD OF

AINOMALY - UNIVERSITY OF WATERLOO, CANADA
- Wrote award-winning security incident response software for the Canadian Special Forces (CANSOFCOM) using Computer Vision and TensorFlow artificial intelligence

AUTOMATE - UNIVERSITY OF CALIFORNIA, BERKELEY
- Reverse engineered Tinder's API by wireshark network sniffing to automatically analyze, rate, and swipe "selfies" with computer vision

BODYWEIGHTFITNESS - SANTA MONICA, CA
- Build bots, chat, and web servers to grow fitness and strength focused community of over 2 million subscribers

CHARITYOR.ME - UNIVERSITY OF CALIFORNIA, SAN DIEGO
- Developed to-do list app that punishes overdue tasks by donating money from bank accounts to charities through Venmo API

CISCO JAILBREAK - UNIVERSITY OF CALIFORNIA, SANTA BARBARA
- Analyzed and exploited a vulnerability in Cisco's Mobility Service Engine to circumvent the system's location tracking services security feature

COVIDTIVITY - SABA, REMOTE
- Created award-winning productivity application for remote working in the COVID-19 pandemic in React Native and Expo build framework, designed in Figma

EVERYCHAT - UNIVERSITY OF PENNSYLVANIA
- Reverse engineered Yik Yak API to make real-time chat app powered by NodeJS and Socket.io in geolocation fences (Chrome and Comcast)

FEATHERIM - BLOCKCHAIN CONNECT, SILICON VALLEY
- Decentralized light-weight P2P instant messaging and video chat over nkn blockchain network protocol

FISTPUMP - UNIVERSITY OF SOUTHERN CALIFORNIA
- Developed Unity Oculus Rift videogame utilizing Leap Motion sensors for augmented reality; Google Sketchup of 3-D Printed VR peripheral

HF TRANSLATOR - UNIVERSITY OF CALIFORNIA, BERKELEY
- Built a speech-to-speech hands-free translator using Google's Web Speech API for transcription and vocalization, wrapping Google's Translate API

INFINITYENCRYPTION - CALIFORNIA INSTITUTE OF TECHNOLOGY
- Created a new mode of PGP RSA encryption key algorithm seed entropy generation by the Synaptic Telegraphe prototype in Python (Win7 API)

INSTAREACT - UNIVERSITY OF CALIFORNIA, LOS ANGELES
- Automated Instagram with Google Cloud Vision's sentiment analysis machine learning model API, running on React Native with Expo build framework

JUNI - JUNIPER NETWORKS, SUNNYVALE
- Developed an award-winning web-wide scalable AI-enhanced Text-Editor in JavaScript that allows everyone to perform research in an easy and streamlined form-factor

JUSTICEMATCH - PAYPAL, SAN JOSE
- Created an award-winning aggregated social network for easy yet effective social signal-boosts with Facebook, Instragram, and Twitter APIs

NUTRIFEYE - UNIVERSITY OF CALIFORNIA, BERKELEY
- Wrote a phone web app to track user macronutrition intake from camera with Google Cloud Computer Vision and USDA database API

REYODA - UNIVERSITY OF CALIFORNIA, LOS ANGELES
- Created MEAN Stack web app that leverages Mashape's and ReSpoke's RESTful APIs to "Yoda-fy" user messages prior to transmission

SECUREDROP - INTERNET ARCHIVE, SAN FRANCISCO
- Contributed to the open-source software platform for secure anonymous communication between journalists and whistle-blower sources by Freedom of the Press Foundation

SOCIAL-ENGINEER FIREWALL (SEF) - STANFORD UNIVERSITY
- With Houndify NLP, developed the world's first firewall software that protects OSI Level 8 (end-user/human) against Black Hat Social Engineers

SUMMONING SURGE - FACEBOOK, MENLO PARK
- Designed and programmed a multi-dimensional videogame in C#, powered by Unity 5

TOUCAN - "DESIGN THE FUTURE OF WIKIHOW", SAN MATEO
- Programmed an award-winning app in C and JavaScript with CloudPebble to take natural language voice dictation input, scrape wikiHow, and determine best result (Python fuzzy string matching) for smartwatch output
